**PROFESSIONAL TRAINING
IN OCCUPATIONAL SAFETY HEALTH
AND ENVIRONMENT (3 Months)**

(Distance Learning)

CIOSHI prepares students for careers in rewarding and challenging field of Industrial safety.

CIOSHI

Safety professionals are needed to protect human lives and property in government, industry, and service organizations all over the world. Competent Safety professionals find positions in ever expanding industries especially construction. These safety professionals usually serve in senior positions. They must be knowledgeable about current safety regulations and techniques of safety management to prevent accidents and losses at workplace.

When tending to the needs of industrial safety; professionals often turn to guidelines and regulations set forth, for the profession by ILO and the Occupational Safety and Health Administration (OSHA). Such guidelines only would improve the ability of safety professionals in their work.

It is believed that our comprehensive safety courses will enhance the learning experience of students that they look beyond regulations. This knowledge will provide an increased understanding of technical concepts specific to the safety profession and will provide the skills needed for identifying, evaluating and controlling industrial hazards as an efficient safety professional.

In addition to internationally recognized faculty members - OSHA certified trainers the program features courses that stay abreast of current trends and initiatives in safety management. Close working relationship with faculty members will not only ensure subject mastery but will produce a mentoring relationship that will last long even after the completion of the course.

CIOSHI is established solely to promote professional standards. CIOSHI exists on its reputation and recognizes Occupational Safety and Health professionals who demonstrate professional expertise by passing the comprehensive examination conducted by the Institute -

WITH CIOSHI's CREDENTIALS YOU ARE ALWAYS WANTED.

Professional Training in Occupational Health Safety and Environment in Construction Industry

CIOSHI is the only International institute that provides a comprehensive program on most desired - modern construction safety management.

The purpose of this program is to prepare the students for employment as safety Inspectors, Officers, Supervisors, Managers or to promote supplemental training for personnel previously or currently employed in these occupations.

The course content includes, but is not limited to the techniques for identification, evaluation and control of safety factors causing occupational accidents and ill health, safe work practices, and skills to technically analyzing working conditions and providing technical assistance in integrating safety in the maintenance of materials, equipments and fire protection systems, statistical analysis based on ILO classifications, communication skills, leadership skills, human relations and employability.

The construction safety training at CIOSHI is a discipline which is advanced technology driven and as such continually evolving with new scientific requirements being addressed by safety professionals all over the world. New interpretations of the discipline are also introduced by innovative technology and CIOSHI continues to adapt the construction safety program as the needs of the modern construction industry at large.

Our Mission

Our mission is to prepare prospective safety practitioners for exemplary service to the community through comprehensive - integrated, multidisciplinary and well co-coordinated safety education, training and consultancy.

We strive to meet the diverse and dynamic needs of our students and sponsors with the full support of the industrial community and its resources.
